

12 – CONSTRUCTION

The data presented in this chapter, regarding building construction, comes from ISTAT sources; the Ministry for the Interior has supplied data regarding the procedure for allocating buildings for residential purposes; the research centre “Centro di Ricerche Economiche e Sociali di Mercato per l’Edilizia e il Territorio” has provided data-banks regarding all public works open to tenders in the Sicilian Provinces during the year.

On the basis of building licences issued by local town councils, ISTAT issues data every three months regarding the construction of new buildings (residential and non-), or for extension-work on existing buildings. The tables in this chapter show figures for all new dwellings and buildings constructed in the Sicilian Provinces in the year 2008 (the last year available).

The data shows that 3,735 new residential buildings were built in Sicily in the course of the year, a total representing over 71% of all new constructions (5,218). Analysis of extension-work on buildings intended to be used principally for residential purposes, clearly shows that these are concentrated in the Provinces of Catania, Messina and Trapani, which together accounted for 48.7% of the Regional total (635,000 m³, including leave-out). At the same time, 62.7% of the volume of work carried out in the Provinces of Catania, Messina and Agrigento was carried out as extension-work on non-residential buildings.

Comparing 2008 with the previous year, the number of newly-constructed residential buildings in 2008 rose slightly (+0.1%); on the other hand there was a 0.5% fall in extension-work on existing buildings, which was in line with the negative trend of the two previous years (-26.3% in 2007, -11.1% in 2006). The situation with regard to non-residential buildings was different, with an increase in quantity (+8.4%) and extension-work (+6.8%, from 628,000 to 671,000 m³, including leave-out).

According to data for the last available year, 2008, there were 12,508 new dwellings in Sicily, representing a 15.3% fall over 2007; this was largely the result of fewer dwellings being built in new residential blocks (-15.9%). On the other hand, the number of habitations built in newly constructed non-residential buildings rose by 15.7% (from 292 to 338). Catania proved to be the Province with the highest number of dwellings (2,859, and 22.9% of the total for the whole of Sicily). The Province of Palermo also registered impressive figures (2,108, representing 16.8% of the total), followed by the Province of Messina (1,887 and 15.1% of the total). The overall number of rooms built decreased in the same year, there in fact being a 17% fall in the number of rooms and a 10.3% drop in the number of accessory rooms (e.g. bathroom, store-room etc.), signaling a return to the negative trend of 2006. A total of 54%

of accessory rooms constructed in Sicily were built in the Provinces of Catania, Messina and Palermo, with these Provinces accounting for about 54.3% of all rooms built in Sicily.

On analyzing the data published by the Ministry for the Interior, with regard to eviction procedures from residential buildings, it can be seen that between 2009 and 2010 the number of writs issued fell by 0.3% overall (from 3,855 to 3,844); 84.6% of this increase was as a result of non-payment of rent on the part of the tenant, whereas in only 15% of the cases had the lease-period actually terminated. At the Provincial level the greatest percentage of legal actions was concentrated in the Province of Palermo (41%), whilst in both Caltanissetta and Enna non-payment of rent constituted the sole reason for eviction orders.

In 2009, with regard to residential dwellings there were 7,838 eviction orders officially presented to bailiffs, which represented an increase of a little over 4.9% over the preceding year, 2009. There was also a rise in the number of actual evictions (+5.7%) when compared to the previous year, with the provinces of Catania and Palermo having the highest percentages, accounting for 65.9% of the Regional total.

From data regarding public works, taken from the research centre Centro di Ricerche Economiche e Sociali di Mercato per l'Edilizia e il Territorio (CRESME), it can be seen that in 2010 in Sicily, the number of public works open to tenders rose by 7.5%. The amounts of money available, 3,253 million Euros, also represent an increase (+43.3%) over the previous year, 2008, when there had been a decrease of 8.6%.

In 2010 Palermo and Catania were again the two Provinces with the greatest number of public works open to tender (24.6% and 15.9% of the total respectively), followed by the province of Messina (+14.9% of the total), although the area of Ragusa showed a considerable increase in total amount (from 83 to 1,547 million Euros); the latter figure accounted for 47.6% of the total amount for works open to tenders in the whole Region.

Glossary

Building: roofed structure, skirted by roads or open spaces, or separated from other constructions by main walls (that rise uninterrupted from foundation to roof); it should have free access to the road and one or two autonomous staircases.

Building licence: onerous authorisation to construct or convert buildings, issued by the Mayor on presentation of a project.

Dwelling: one or more rooms for dwelling purposes, with a separate entrance from the road, and a landing, courtyard, terrace, balcony or similar.

Extension work (to a building): further construction, horizontally or vertically, of rooms in an already existing building, with an increase in the volume of the building.

New building: building constructed from scratch, from foundations to roof; this includes those structures that have been completely re-built.

Non-residential building: building, or part of building, intended mainly or exclusively for uses other than residential.

Public works (category): types of work among which public works (road, airport) are classified.

Residential building: building or part of building, intended mainly or exclusively for residential use.

Room (for dwelling): covered area, enclosed on all sides by walls (in brick, wood, glass etc.), which do not necessarily have to reach the ceiling. Walls that include a considerable open space (arches or similar) are to be considered as dividing walls, except where one of the two divided rooms, because of its small size, is practically an integral part of the other.

Volume of a building (including leave-out: estimated volume of extended areas): total volume of the space included between the external walls, the lowest floor and the roofing measured from the outside.

Work (for public works): part of a technically distinct work-operation contributing to the construction of new public works, structural improvements or special repairs to an existing building or part of it.
