

ENGIE is Europe's leading brand for efficient energy use. With 3,000 staff at 30 locations, we can open up individual perspectives for you in an absolute market of the future in Germany. As a part of ENGIE Deutschland, ENGIE Deutschland GmbH combines engineering, energy and service expertise into an integrated portfolio. Our sound knowledge of all building engineering trades is the basis for convincing solutions in the construction of complex facilities, in technical building management and innovative energy services in the fields of energy contracting, energy management and energy efficiency. Enrich our fields of expertise in engineering, energy and service with your know-how!

To reinforce our team in Berlin, we are looking for an

## Electrical / communications project engineer

for the building services unit.

### Your tasks include:

- Technical design in consideration of interfaces and functions in the trades of electrical and communications engineering
- Coordination with the responsible project leader within the work package description for work scopes, qualities, deadlines and available costs
- Creation of opportunity and risk analyses for contracts with respect to technical and functional aspects
- Identification of required execution services based on the provided planning documents
- Elaboration of alternative concepts, including identification of the services required for price calculation
- Creation of quantity surveys, component lists and compilation to prepare placements and orders
- Technical review of offers for contract conformance
- Review and stipulation of the design and specification of appliances, control systems and plant sections to achieve functionality in consideration of the interfaces for the construction
- Technical support for the construction management and project leadership

### What you contribute:

- A degree in automation, electrical or communications engineering or training as a master or technician in these areas
- Ideally several years of on-the-job experience in technical building equipment
- Confident handling of MS Office (Word and Excel) and technical calculation software in the specialist field
- Highly enterprising in thought and deed, a great willingness to perform, flexibility and a self-reliant and results-oriented way of working
- Communicative manner, a great sense of responsibility and team spirit.

### For applicants from abroad we offer:

- An internal mentor to support your integration and induction training
- Assistance for a language course and finding an apartment
- Permanent employment contracts and high safety standards
- Individual development perspectives all around the subjects of technology, energy and service
- Continuous and needs-oriented training offered by the ENGIE Academy
- A secure and diverse future in a group of companies that has been anchored in the German market for many years and pools know-how across the entire spectrum of energy and multi-technical services, from A for appliance design through to Z for zero emissions
